

COLOR AND BRIX[®] AGRARES

DEFINITION

color and BRIX[®] AGRARES is specially formulated to increase the content in sugars of the cultivations. The application of the product promotes the synthesis of sugars perfectly at leaf level, improving the quality and the aspect of the fruits.

The use of COLOR and BRIX[®] accelerates maturation and then it improves the quality of the fruits.

APPLICATIONS

color and BRIX[®] must be diluted and added with waters in a minim proportion of 1:100. The general dose of application is approximately 2-3 L/Ha.

COMPATIBILITIES

color and BRIX[®] AGRARES are compatible with the majority of the fertilizing NPK of normal use, doesn't mix with products of alkaline reaction, with calcium products, mineral oils and with acid products.

Cultivation	Dose folioes	Mode of application
Fruit trees	2 L/Ha	Applying 40 days before the crop
Grapevine and grape of table	2 L/Ha	Applying 40 days before harvesting
Horticultural: tomato, pepper, etcetera.	1,5 L/Ha	Applying 1 L/Ha each 15 days in times of low luminosity
Beet	2-2,5 L/Ha	Applying 40 days before the harvesting
Industrial tomato	1,5 L/ has	Applying 40 days before the harvesting
Melon and strawberry	2-3 L/Ha	To apply with the appearance of the first flowers
Other cultivations	2-3 L/Ha	Applying 40 days before the harvesting
